

Ban Nong Lueang School

21 November 2019

In the back of this schoolyard sits an abandoned building that once served as the lunchroom & kitchen. Unfortunately it was located next to a natural waterway. During the rainy season the water would rise and it was not uncommon to find the lunchroom flooded and some times by no less than 3 feet of water. The children would then move their desks to the walkway in front of their classrooms to form a table so they could eat lunch.

This year the local community collected donation to construct a new lunchroom.

Today, Post Members travelled to the school (about 80km) to make our donation of electrical supplies. (PVC conduit, junction boxes, wiring, lights, outlets, switches and other necessary items to complete the electrical work on the new facility).

Donation also included a new water chiller and 6 ceiling fans.

Thank you for your support
and generous donations

Completed Electrical work
